STREETLIGHT METER ADAPTER

ABOUT

TESCO's Streetlight Meter Adapter will convert a standard ANSI C12.10 meter socket into an ANSI C136.10 compatible 3-pole photocell meter socket.

LEDs are less maintenance, use less energy, create less light pollution, provide better lighting — especially in emergency situations — and have a longer life. No wonder utilities are moving toward LED Streetlights.

With all of these advantages comes a new requirement: the individual and small group metering of streetlights. These streetlight meters are not traditional ANSI style meters. TESCO has been working on testing and certifying these meters for several years and has the equipment you need to be able to first certify and then test the new streetlight meters.

Contact your **TESCO representative** for more information or call **TESCO** directly at **215-785-2338**.

FUNCTIONALITY

TESCO's Streetlight Meter Adapter fits on all TESCO test boards, meter farms, and desktop stations, as well as any other manufacturer's board. The adapter is used as a Form 1S in any of these boards.

With TESCO's Streetlight Adapter, you can power up the photocell meters to test communications, on/off control and meter accuracy.
